AliceStreet Conference Center

A **real** conference room on your desktop

The AliceStreet Conference Center enables real human interaction when the participants in a meeting can't be in the same physical location.

Effective meetings are about getting people to communicate - not about reading out lists of fancy bullet points, or interminable conference calls where you can't even work out who's speaking.

Our unique, low bandwidth, secure software solution integrates voice and video into a human, intuitive conferencing environment and is simple to deploy in almost every mainstream environment. Now the people in your organization have a simple and productive way of getting together - even when they can't actually be together.

The product

The AliceStreet Conference Center is a PC-based client-server software solution. AliceStreet licenses server software as a once-off software. The client software is installed once off from the server at no additional charge. Alternatively the AliceStreet Conference Center can be accessed as a service, either hourly or as a monthly subscription service.

Server software runs on a Windows platform PC and installation is extremely simple. As a native IP application, the solution should run out of the box on almost all private (or virtual private) networks. Furthermore, AliceStreet's architecture based around the concept of a virtual "room" means that a single server implementation won't run the risk of swamping your network with voice and video traffic.

The AliceStreet client and server software handles all voice conferencing as well as video, application and slide sharing, so there is no need to use a separate audio conferencing bridge service - once you've bought the software, there are no further charges involved in holding a meeting in your own AliceStreet Conference Center.

Applications

The AliceStreet Conference Center uses industry standard H.323 and HTTP protocols making deployment for a number of uses almost seamless.

Communicate easily to:

- Present to potential clients
- Hold executive meetings
- Train and mentor
- Manage projects
- Support IT issues
- and more.....

The AliceStreet Conference Center: Communicate today

Features:

The **AliceStreet Conference Center** comes with an incredible set of features, all included, to complete your on line meeting experience.
